

# Value proposition

## Problem Definition

Can children who have limited conversations due to

1. busy parents,
2. long-term hospitalization, etc.,

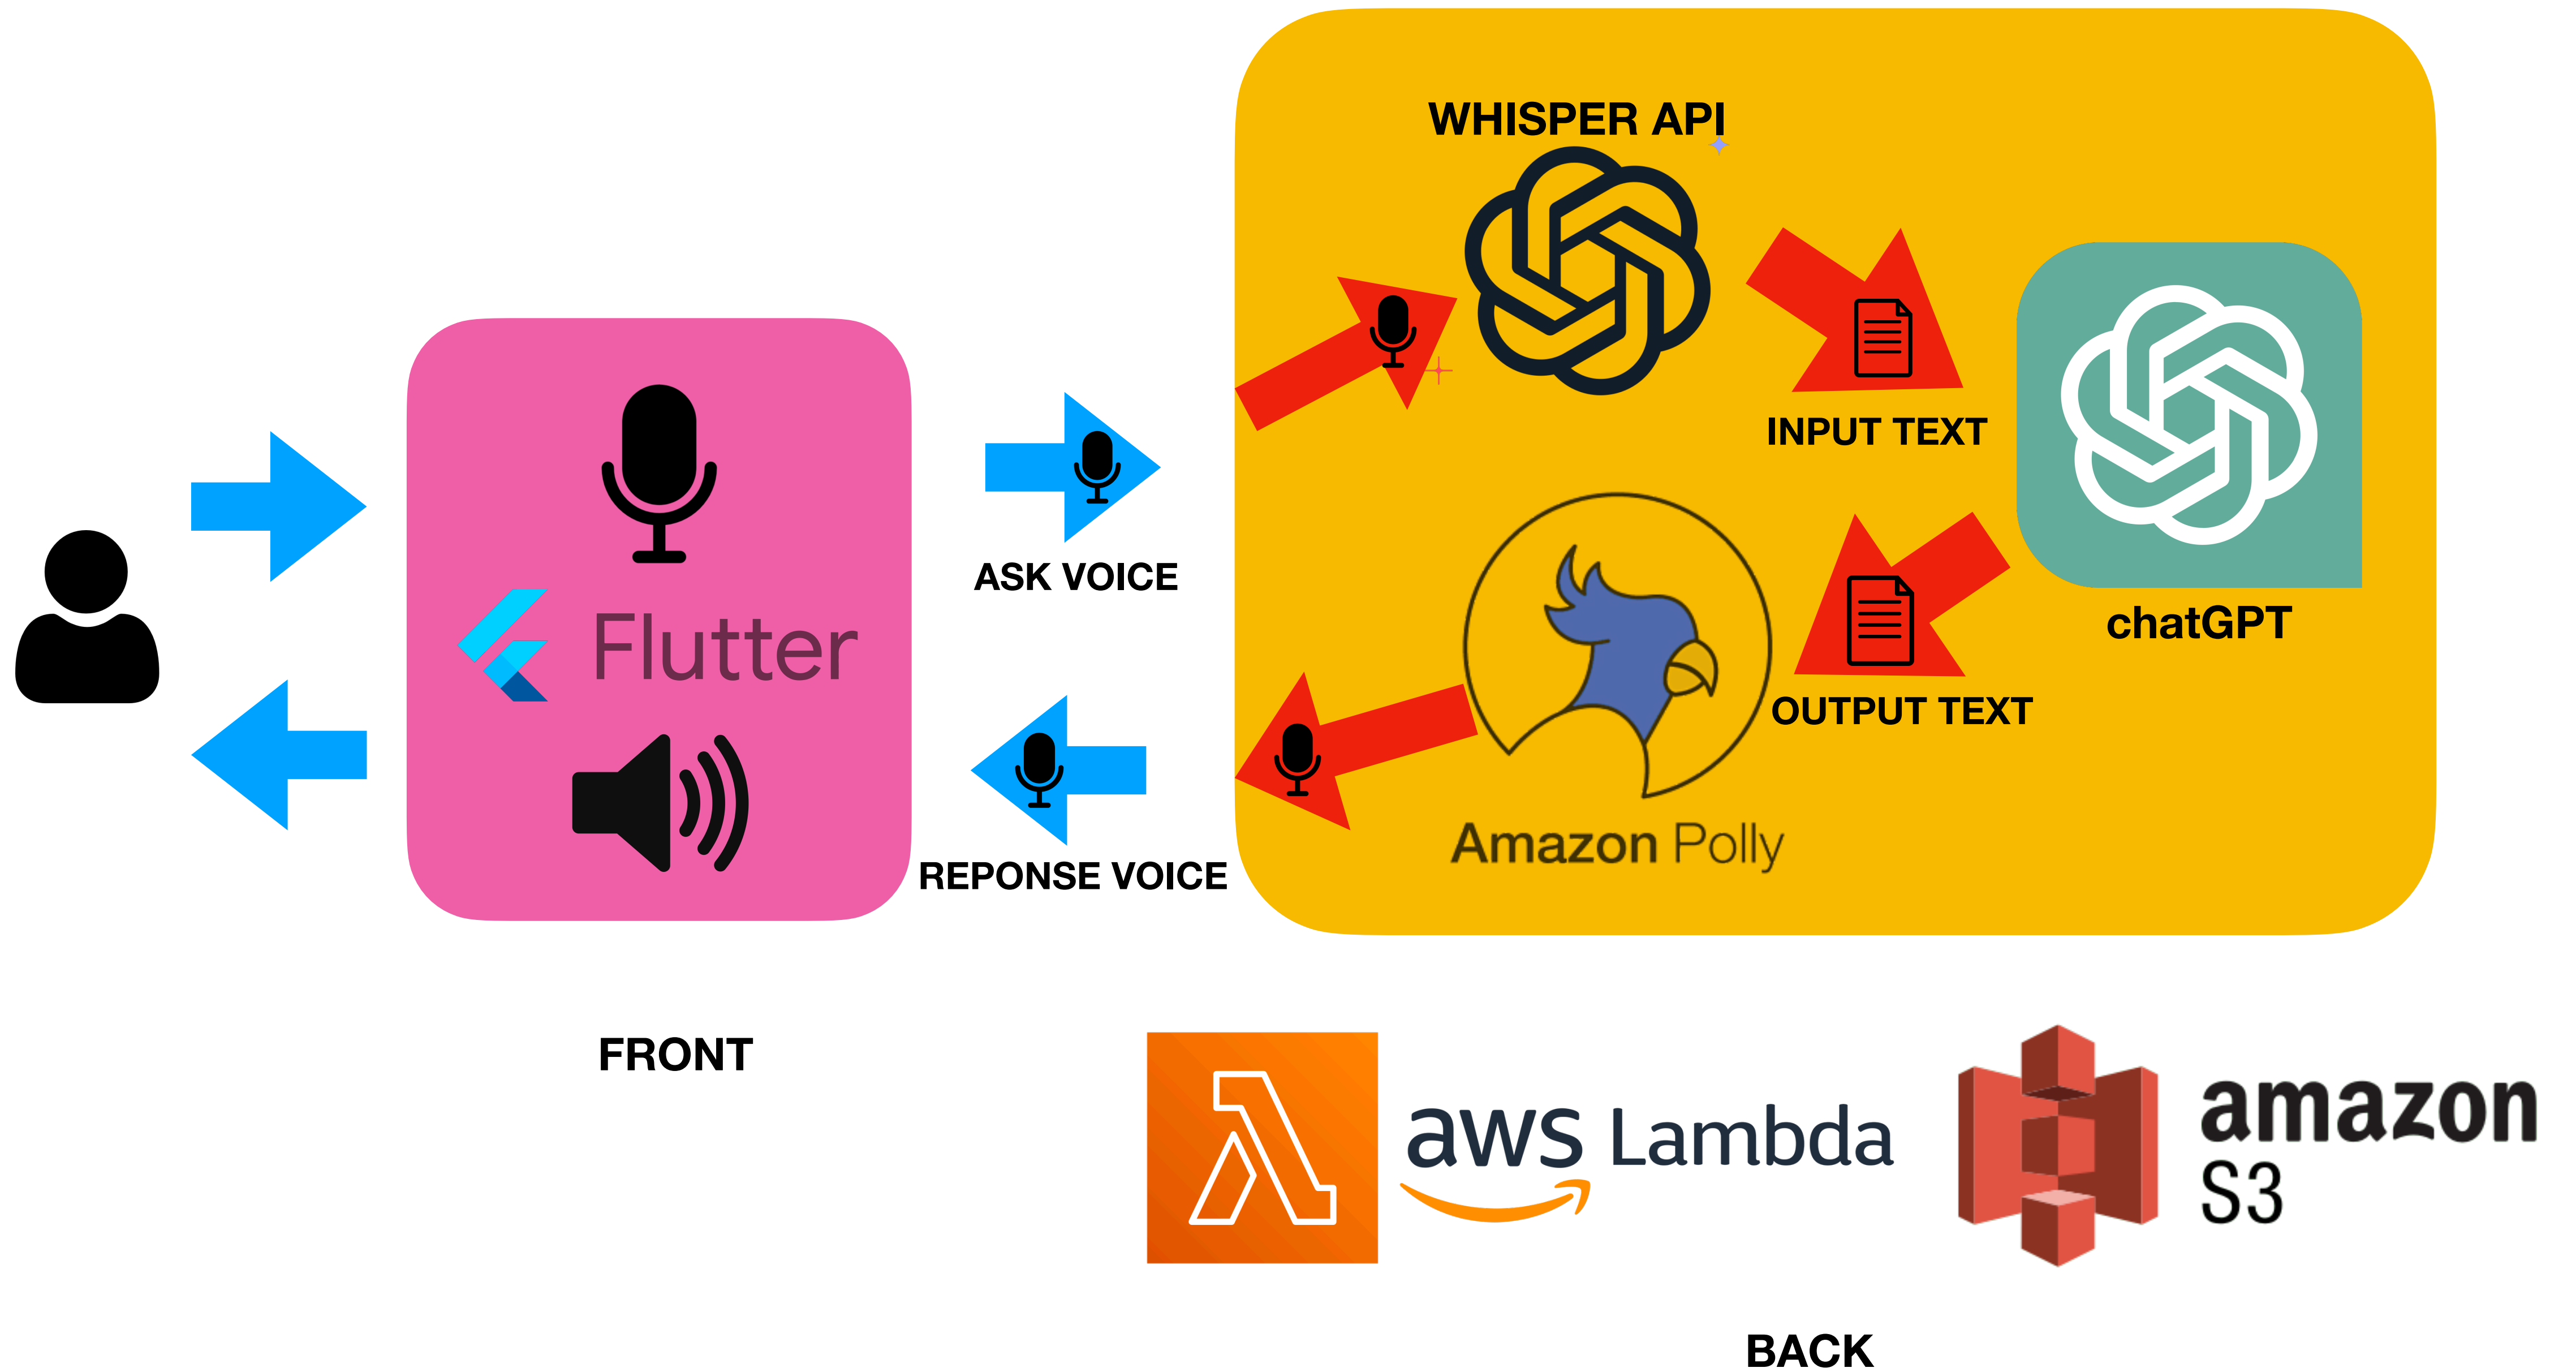

Develop language and social skills through consistent two-way communication?

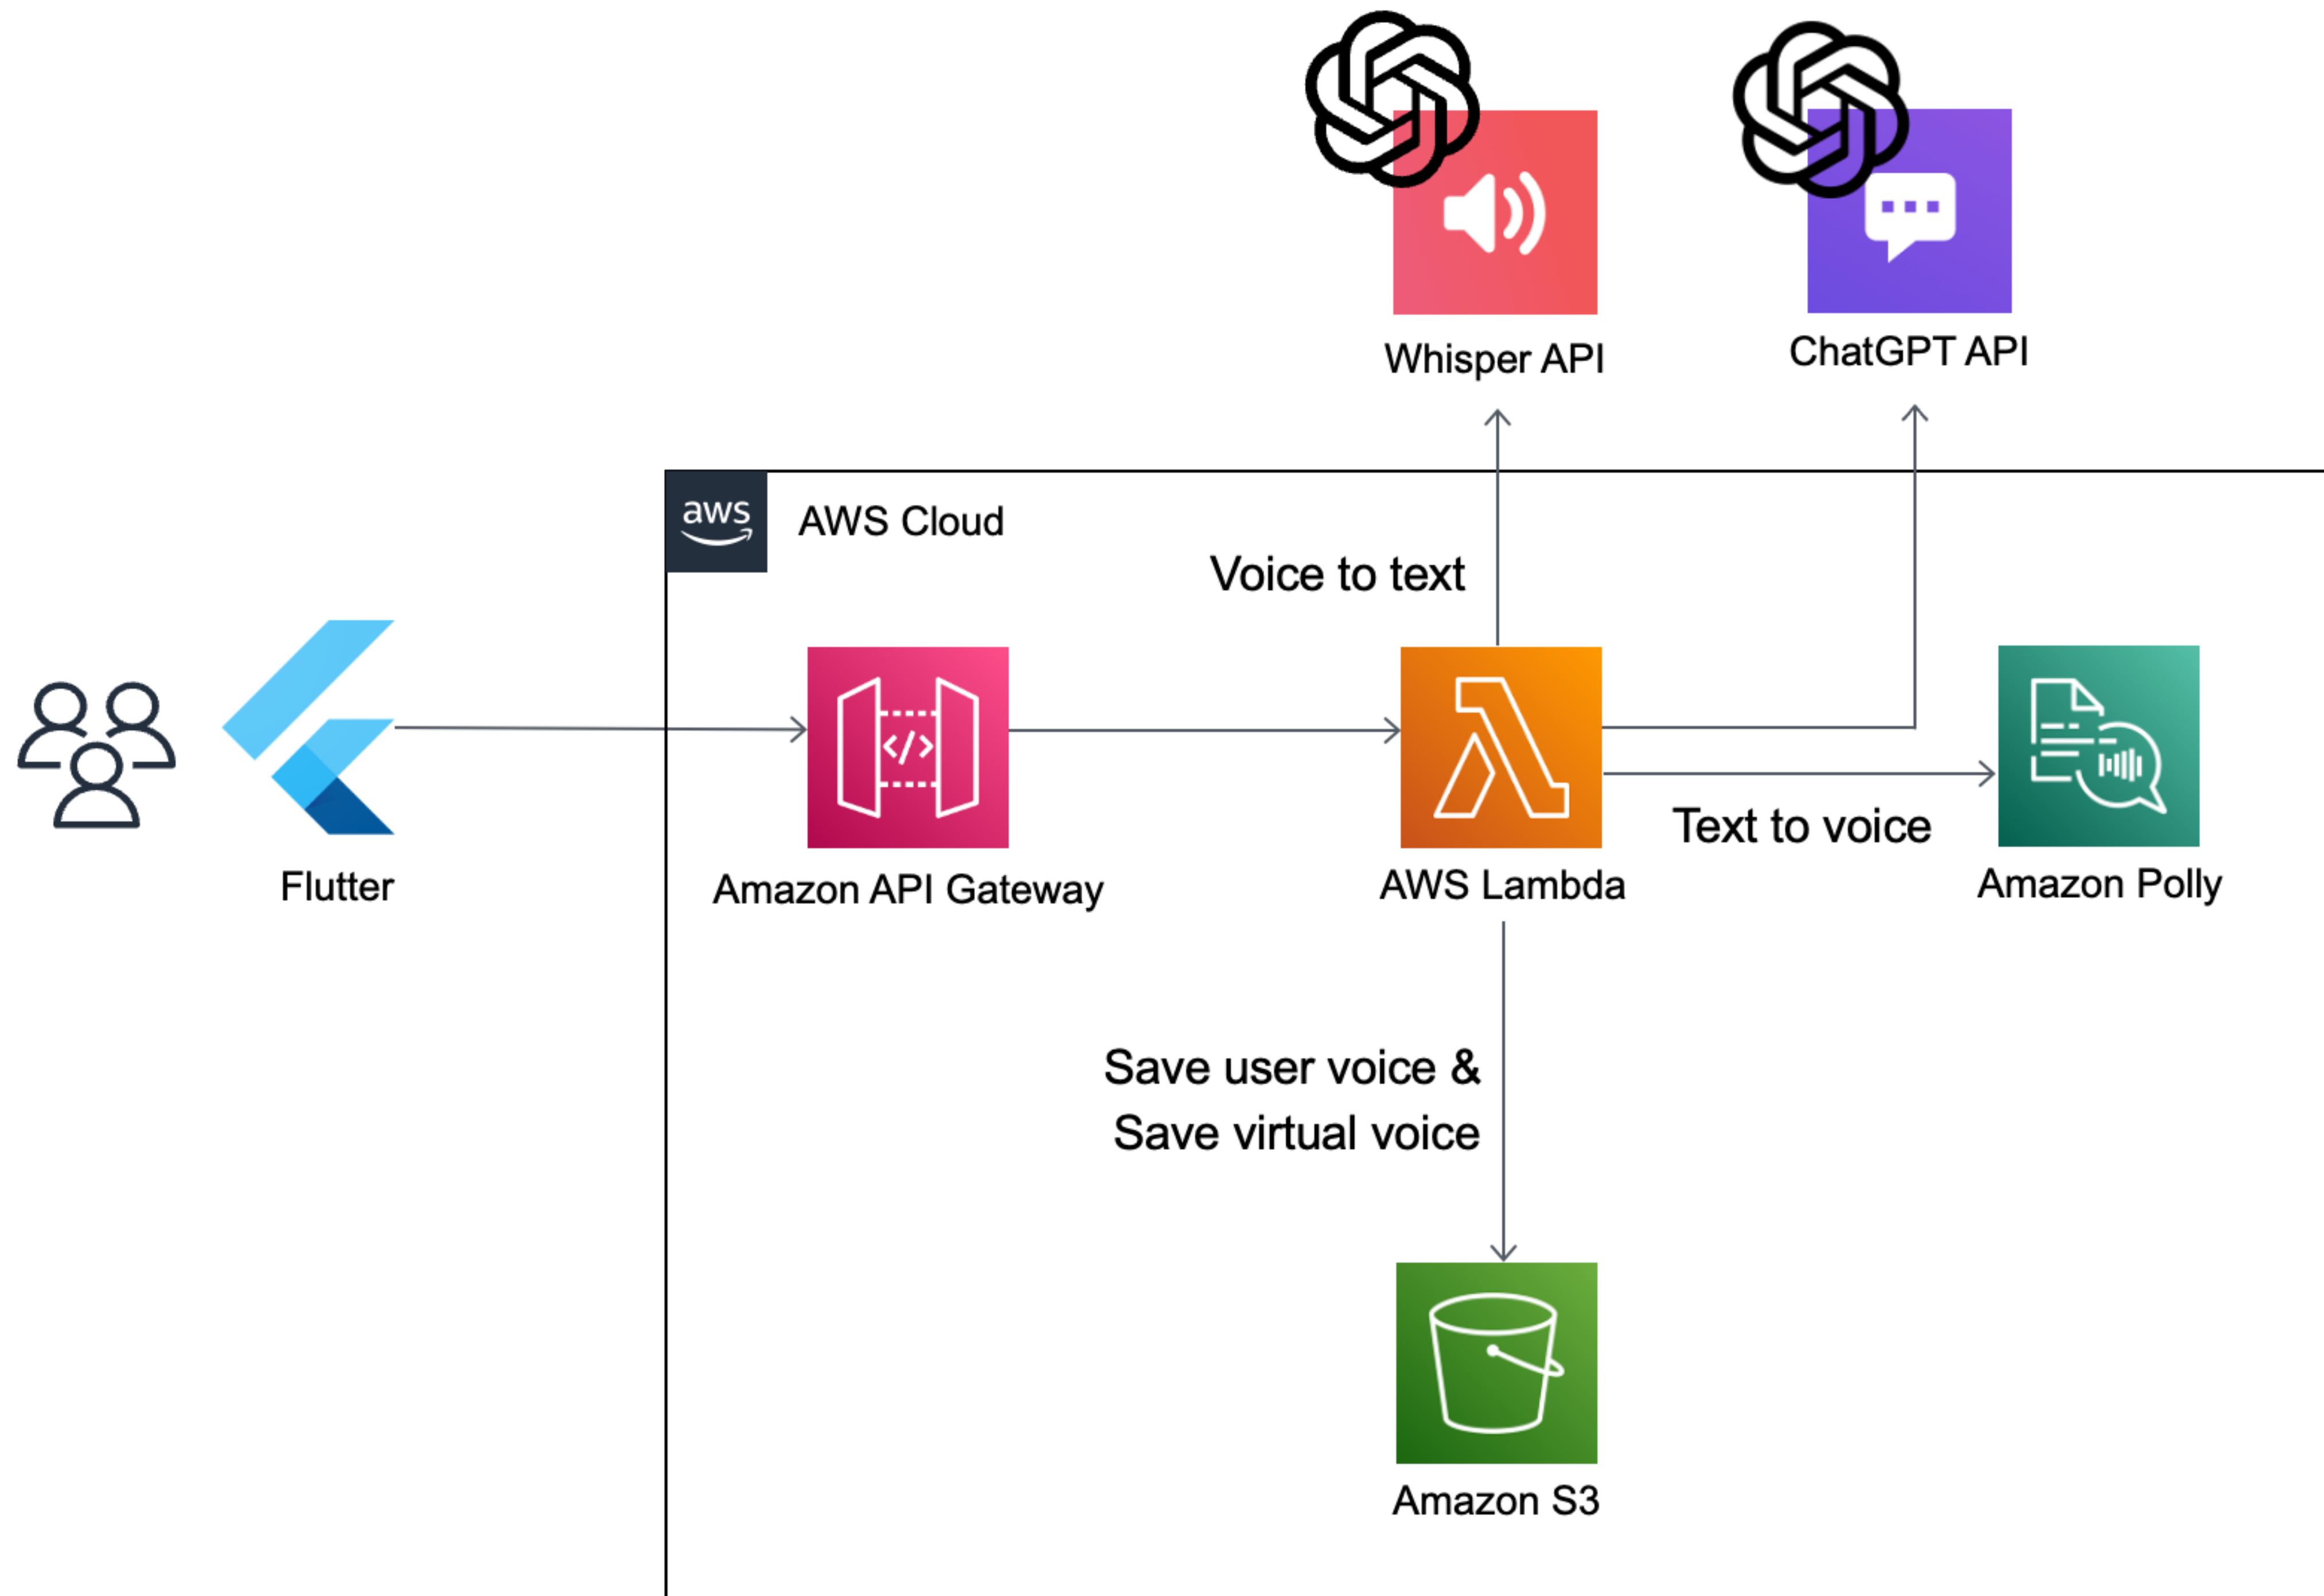

## Key Object

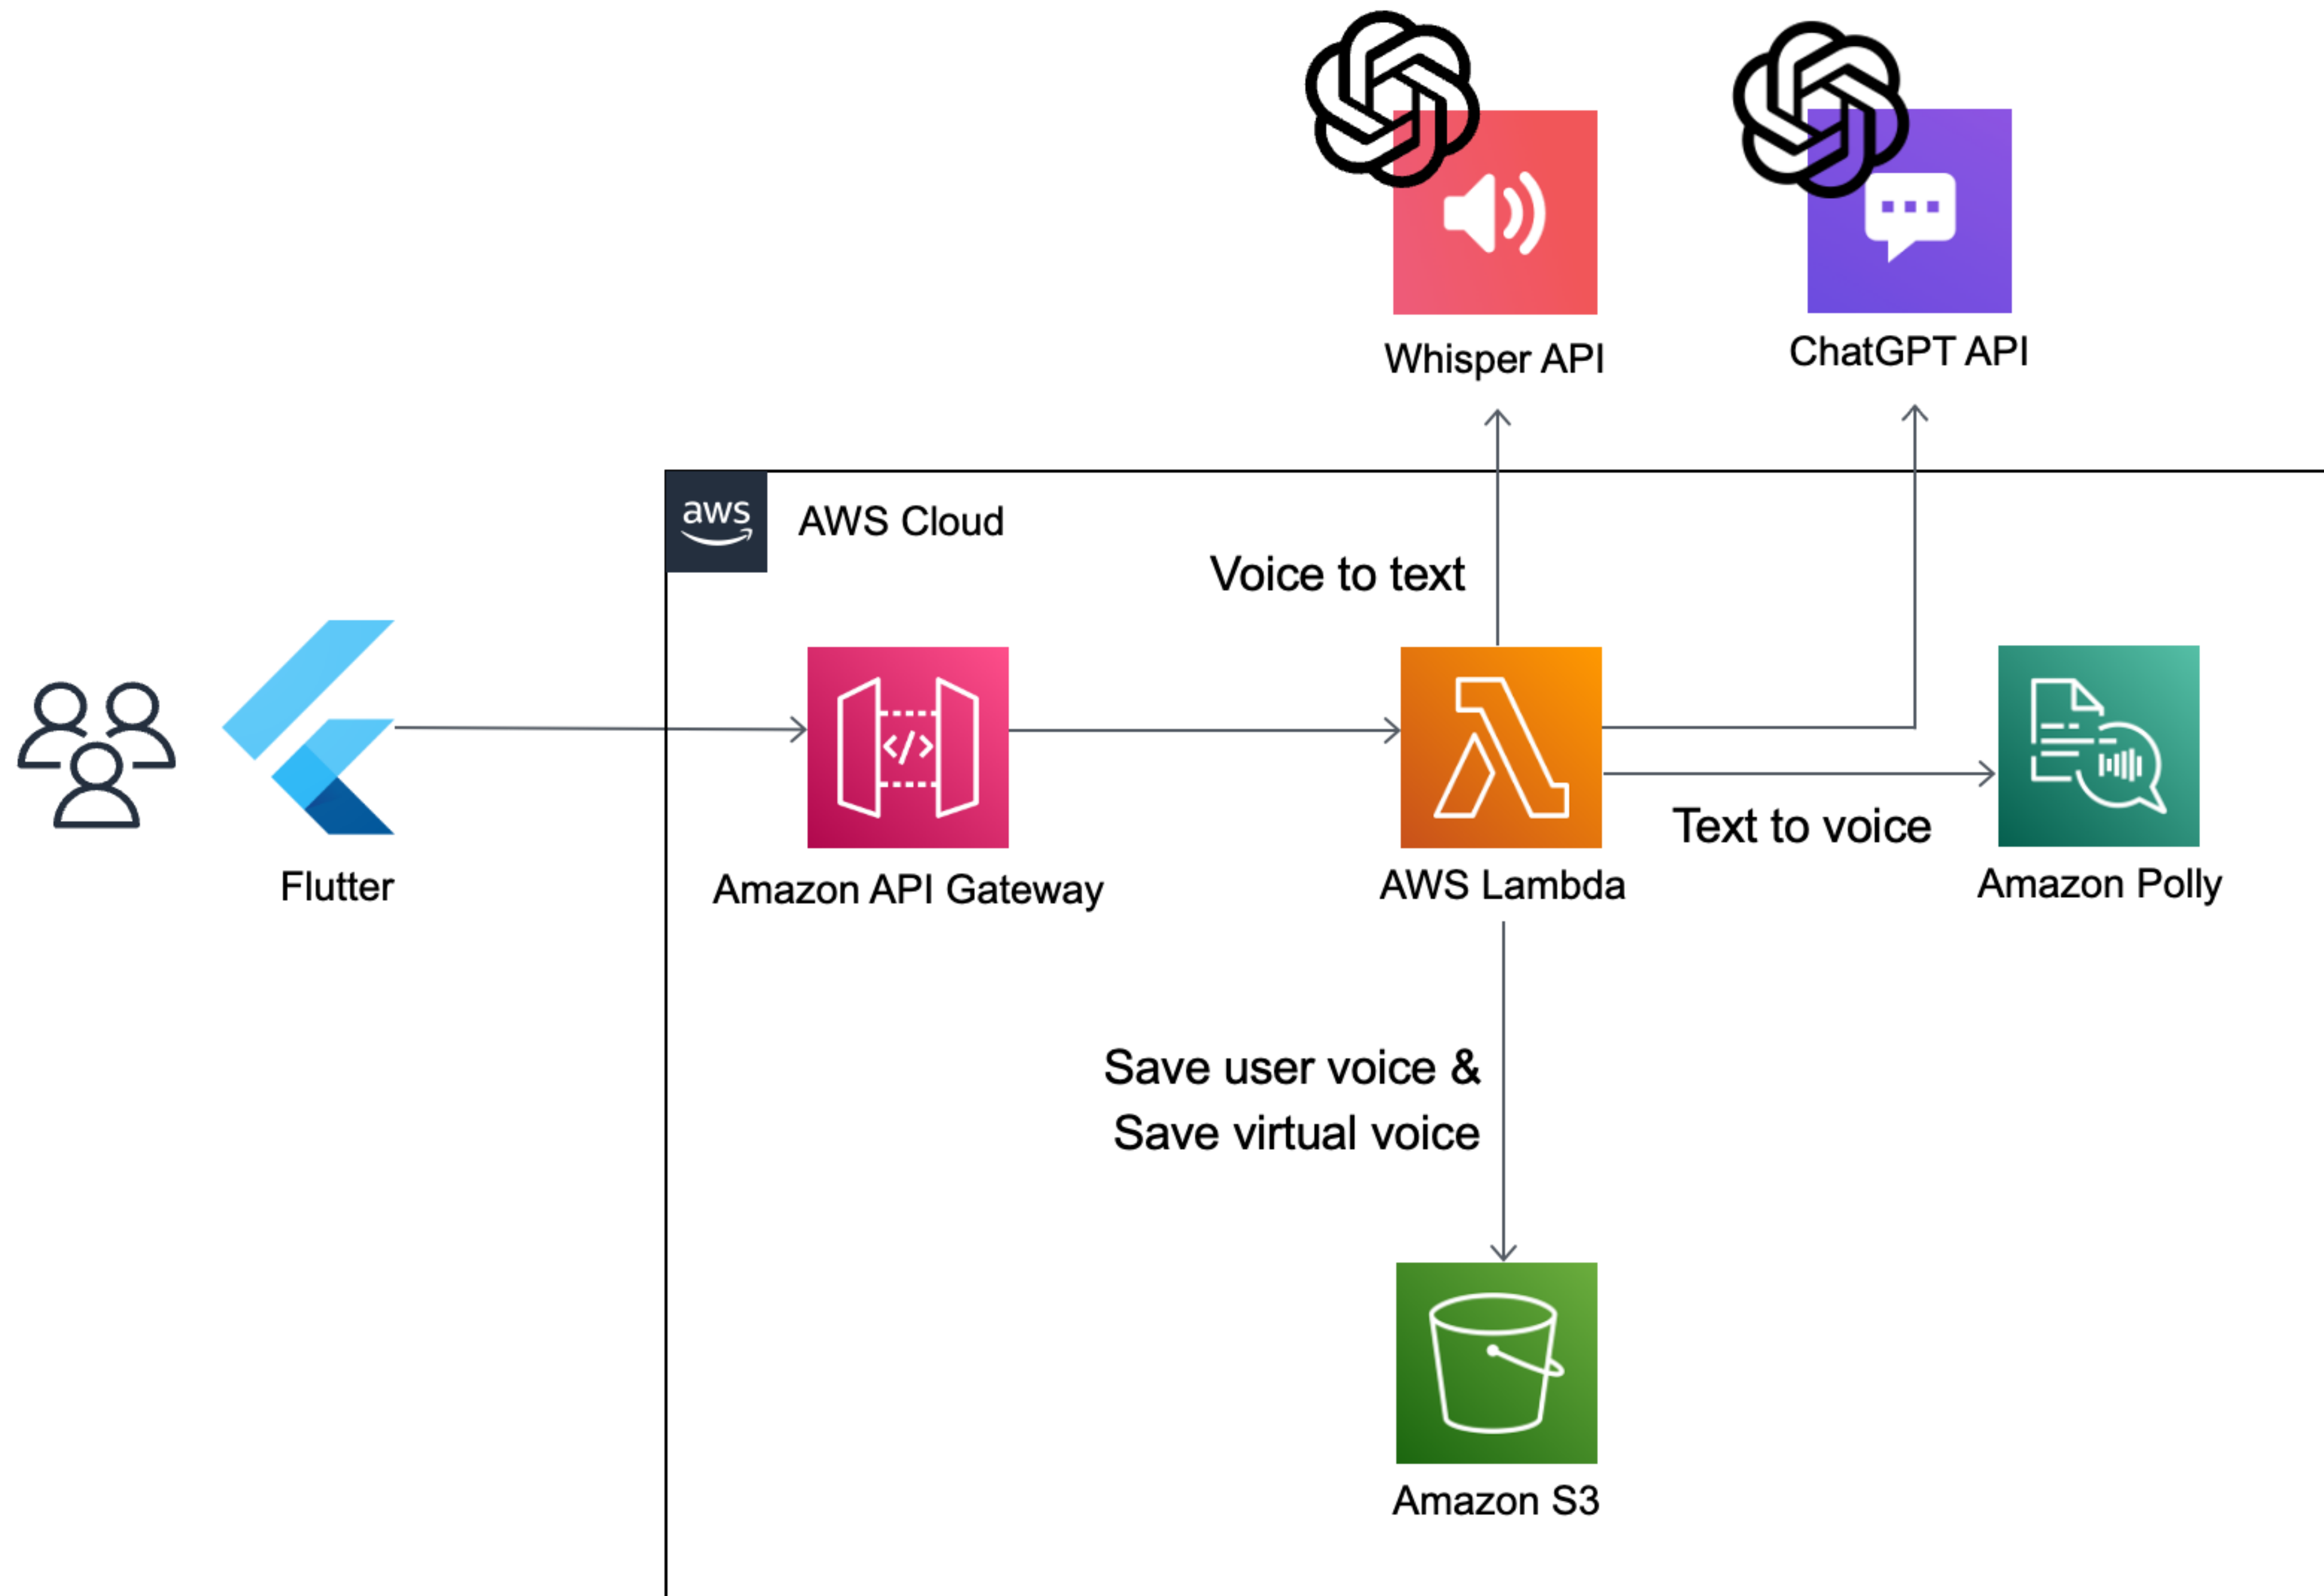

1. We can have conversation through text using chatGPT  
-> Fine tuning
2. If there is a way for it to read the text in my desired voice, we could have a two-way conversation?

## Solution

# Futurework - 3 Issues

- meta open source twitter

## Copyright

Q. We have not secured the rights to any characters from animation or other media to use in our application.

A. What if user could have a conversation with a character user drew?

## Delay

Q. Longer responses from the chat gpt extend the time until the user hears the appropriate answer too much.

A. The need for content that users can enjoy while waiting for a response.

## Effectiveness

Q. Need to validate the effectiveness of our application.

A. Release to real-world app stores and see how users react
